***Response to Amendment***

1. Claims 1-11 are allowed.

***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

JP 404070355A, "Ink head recovery device" issued to Sugawara et al., 3/92 teaches a capping device (19) covers a nozzle plate (2) of a print head (1), and a closing plate (25) disposed inside the capping device is pressed against the nozzle plate, then motor (18) is activated, pressurized air applies to ink in the buffer ink tank (11), ink in the ink path (3) is then pressurized, then the closing plate is released from the nozzle plate, and the pressured ink in the ink path is then ejected out from nozzles so as to clear any clogging in the nozzles.

This reference is close to the instant application, however, when the pressure air applied to the ink tank (11, corresponds to the cartridge in the instant application), the cap is not released from the face of the head.
